- **The first book to bring together fundamental materials covering the whole of international economic law, including trade, investment, and financial law**
- **Features a general introduction putting the documents in context**
- **Comprehensive coverage of the whole field will allow readers to see international economic law in its entirety, avoiding the pitfalls of fragmentation that often mark this field**

The collection brings together documents relating to the three main pillars of international economic law, namely world trade law, international monetary law, and international investment law. These are preceded by texts of a more general character, notably issued by the United Nations and clarifying the parameters of international economic relations. This broad focus enables readers to view international economic law in its breadth and to avoid the pitfalls of a 'compartmentalised' approach, which exclusively focuses on, for example, WTO law or investment law without appreciating their interrelation. By bringing together key texts of all three branches, the book should be invaluable to students taking general courses of international economic law as well as more specialised courses such as WTO law or investment law.
